

S-VIDIA Quick User Guide

Installing the S-VIDIA Client

- Download the S-VIDIA Client software from www.svidia.com/downloads.
- Follow the on-screen directions to complete the installation.

Initial Client Software Configuration

After installing the software, find the green camera icon on your windows desktop or within the start menu.

Please note that some default settings must be changed for optimum viewing.

Display Refresh Rate:

- By default the video display refresh rate will be set to 3 frames per second.
- To change this, access the system configuration options by pressing the system configuration icon in the very top left of the software display. 
- Locate the Display Refresh Rate slider and adjust it to the maximum setting by moving the bar to the right. (25fps will be displayed)

DirectX Acceleration:

- Enable DirectX Acceleration by pressing the DirectX Properties button.

- Press the Maximum hardware acceleration and Antialias filter buttons if they are not green.
- press close to close the dialog.
- Press the "check" button to save the settings.

Layouts/User Interface

- Change between layouts by selecting preset layouts in the very bottom right of the software display.
- Options include: single view, quad, 8cam with focus, and 16cam view.
- Deselect the preset layouts to enable custom layout mode.
- Select the cameras you wish to display via the camera bar at the bottom of the software display.
- Click and drag camera views to reorder their position within the camera display.
